

Oval Overflow Tubing

Overflow tubing is used to create an overflow system in a cultured marble or solid surface vanity bowl. The components are installed prior to casting. Review the diagram at right for more information about overflow system components.

The Overflow Tubing connects directly to the polycollar at the drain end and to the overflow stem at the overflow outlet. The Overflow Pipe becomes a permanent part of the finished bowl. The Overflow Pipe connects directly to the oval polycollar at the drain end and to the overflow stem at the overflow outlet. In addition, it features an integral, calibrated scale that permits quick and accurate trimming to achieve a proper fit on any size and shape of bowl. Like the polycollar, the overflow tubing becomes a permanent part of the finished bowl.
